PING ERROR TEST

Explain proper scenario for following ping errors ?

Destination host unreachable

When try to Ping some IP, Our PC checks destination in same network, If it is different network, Our PC shows destination host unreachable. When PC don't have route for the destination, the result will show Destination Host Unreachable.

Request timed out

When we ping some IP, if our PC has gateway, our PC sends echo request out, but we not receive echo reply, our PC shows Request Timed Out.

When PC has the route for destination IP and it will send ARP request, ARP request went out from PC, but no reply, so there is some issue, it will show Request timed out.

Reply from some ip destination host unreachable

When we try to ping, our PC sends Echo data packet to gateway, gateway checks its routing table and tries to forward next hop, The next hop network is down (or) no route to final host, that router sends back the error of reply from router IP destination host unreachable.
