LAN COMMUNICATION TEST

1, Explain uses of ping command in network ?

PING: Packet Internet Group, It helps to know about the Reachability between two devices.

2, Explain netbios protocol ?

Gives each computer character name on the LAN, that's how devices find each other instead of using IP address. Netbios command $\rightarrow$ Run $\rightarrow$ type ncpa-cpl $\rightarrow$ Properties $\rightarrow$ IPv4 $\rightarrow$ Properties $\rightarrow$ Select OK and close, now Netbios enabled.

3, Explain SMB protocol ?

SMB stands for Server Message Block, SMB is the Set of rules for the devices to devices communication. SMB is actually does file access, Printing sharing, Authentication and communication. Rung on port TCP 445. SMB1 - Old Version, SMB2 - Introduced with Windows Vista for speed purpose, SMB3 - Added encryption, RDMA support and super fast networking, SMB3.1.1 - current standard can recover if server fail.

4, Explain ping process from 50.0.0.10 to 50.0.0.20 ?

First we need to assign IP address to both devices, IP address assign formula $\rightarrow$ Run $\rightarrow$ ncpa-cpl $\rightarrow$ LAN $\rightarrow$ Properties $\rightarrow$ IPv4 $\rightarrow$ Select use the following IP address $\rightarrow$ Type IP and Subnetmask $\rightarrow$ click OK and close. Once IP is assigned Open Command $\rightarrow$ Type Ping 50.0.0.20 $\rightarrow$ Enter.

Sample:

```
C:\Users\user> Ping 50.0.0.20
```

Pinging 50.0.0.20 with 32 bytes of data:

Reply from 50.0.0.20: bytes = 32 time = 1ms TTL = 128

Reply from 50.0.0.20: bytes = 32 time = 1ms TTL = 128

Reply from 50.0.0.20: bytes = 32 time = 1ms TTL = 128

Reply from 50.0.0.20: bytes = 32 time = 1ms TTL = 128

Result = Packets: Sent = 4, Received = 4, Lost = 0 (0% loss)
