DEVICE TEST

1, Explain behaviour of hub device

Hub is very old version device, It will run as broadcast device. This device no need any mac and IP.

Drawbacks: Due to some multiple connection, It will affect collision and traffic.

It is a layer 1 device.

2, Explain behaviour of switch device

It's a layer 2 device, It will run like a broadcast device, It contains Mac table, If data comes to Switch, It will check the Mac table first, If address is not available, it will send broadcasting and get the answer as unicast. Then Mac table add the address learning.

3, Explain behaviour of router device

It is a layer 3 device, It contains routing table, This routing table has list of route.

Routing - IP - 3 info - 1. Network ID, 2. Prefix, 3. Interface Name.
It is used to connect devices in different network, If a data comes to Router, the device check the routing table first for the purpose of unicasting.
